

AirHead

AirHead

Philosophy

Our AirHead is a passive attenuator plug for all types of microphones. Whether capturing booming drums or roaring guitar amps, AirHead's -15dB attenuation prevents clipping, ensuring pristine recordings. Plus, by attenuating your signal, you can crank your favorite preamp. Your preamp is now operating in a higher gain range, so the sonic character of your preamp is more emphasized.

Operation

Your *AirHead* will latch straight onto any XLR equipped microphone, or anywhere else in the signal path between microphone and preamp/mixer.

With AirHead, phantom power can still reach your microphone, and its balanced XLR input and output guarantees seamless integration into your setup.

Features

- Passive -15dB attenuator
- Balanced XLR input/output
- For all types of microphones
- Allows phantom power to reach the microphone

Dimensions

height: 3" / 76mm

width: Ø 0,86" / 22mm
